

TEAM BUILDING

CIRCUS SKILLS, PHYSICALITY and CREATIVITY WORKSHOPS
with The Dust Palace

If your company is seeking out an innovative and unique approach to building a stronger working core, then The Dust Palace offers a comprehensive and varied Team Building Experience that can be personalized to best match your team's unique needs. With three different avenues to choose from, you can focus on Circus Skills, Body Work, or Creation.

Circus Skills offers a look at developing movements that focus on balance, patterns, rhythms and timing. Finding a consistency that performs is key to creating a team of individuals who can accomplish a goal dynamically and reliably. Groups will learn how to work with each other's unique abilities to hone individual skills.

Body Work zones in on exploring the intricacies of the body in the air. The experience aids individuals to be aware of fitness, flexibility, and core control. The understanding of one's own strengths and weaknesses will aid him/her in developing a sense of ability. Understanding how they can contribute to a group dynamic the most effectively as well as create the best avenue for self-improvement.

Finally, Creation looks at all of specifics and details into devising an act of creation and how ensemble work is key for success in the long run. Starting from a skeleton idea and developing a moving product will teach a team how to interact constructively and effectively to display the best possible outcome to onlookers. An Image can make or break an idea and it takes a solid understanding of each team member to produce the perfect picture.

Every avenue gives a fresh perspective on how to achieve a more tight-knit team force using the circus basics of spotting, body awareness, group observation, and problem-solving. All of these options can be brought into your working environment or can be hosted at the Dust Palace headquarters in Penrose.
